Authentication Handlers in ASP.NET Core

AuthenticationHandler<T>

Low level, raw API that allows that gives a lot of power, but is harder to implement

RemoteAuthenticationHandler<T>

Higher level, more specialized API that supports authentication of users using external providers

Warning! Security is hard!

Dummy Identity Provider

/SignIn?returnUrl=<Callback URI>
 – POST – Payload=[Encrypted JSON]

/SignOut?returnUrl=<Callback URI>

Overview

Create RemoteAuthenticationOptions

Create RemoteAuthenticationHandler<T>
- Challenge
- Authenticate
- Sign out

Add extension method for registration
