Combining Different Authentication Methods in the Same Application

Chris Klug

CODE MONKEY

@ZeroKoll   http://chris.59north.com

Overview

Server-side

– Set up authentication

– Set up cookie authentication

– Create an API
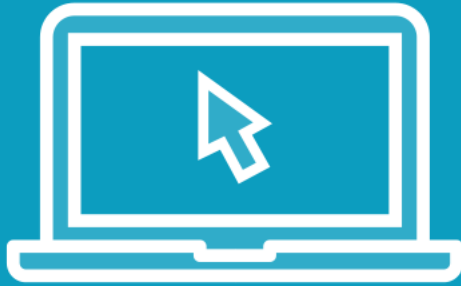

– Set up bearer token authentication

Client-side

– Retrieve an access token

– Pass access token to API

Note: This module uses the application that was set up in the module "Authenticating Users Using OpenID Connect and IdentityServer"

Demo

Create an HTTP-based API

Use JavaScript to call the API

Set up the API to use bearer tokens

Use oidc-client.js to get access token

Update JavaScript to use bearer token
